ABSTRACT

Nutrition for kids is based on the same principles as nutrition for adults. Everyone needs the same types of nutrients such as vitamins, minerals, carbohydrates, protein and fat. What's different about nutrition for kids, however, is the amount of specific nutrients needed at different ages. Now a days we are seeing that lot of synthetic popular health drinks are available in the market such as brand X, brand B, brand C etc. These Synthetic nutrients are dietary supplements made artificially in a laboratory setting or industrial process. The majority of these supplements available on the market today are made artificially. Taking large amounts of synthetic nutrients can have harmful health effects. Results from many clinical trials shows that Synthetic health drinks can increase the risk of premature death. Other studies have linked that synthetic multivitamin in these health drinks use to increased cancer risk, and synthetic folic acid in these health drinks is harmful for our health as It build up in the body and raise the risk of cancer whereas Natural nutrients in nutrease Kid powder contain "whole food supplements," which are made from concentrated, dehydrated whole foods. Based on these facts NUTREASE KIDS: A Unique Kids Essentials Formula Encompassing the Wisdom of Nature, Developed by R&D Centre, Lactonova Nutripharm (P) Ltd, Hyderabad. The present paper Reviews the Role of NUTREASE KIDS in physical & mental development of children.

Keywords: Malnutrition, Good nutrition, Nutrition for kids, Nutrease kids.

1. Introduction

Synthetic health drinks Vs Natural Nutrease Kid health drink.

Now a days we are seeing that lot of synthetic popular health drinks are available in the market such as brand X, brand B, brand C, etc.

These Synthetic nutrients are dietary supplements made artificially in a laboratory setting or industrial process. The majority of these supplements available on the market today are made artificially. Taking large amounts of synthetic nutrients can have harmful health effects.

Results from many clinical trials shows that Synthetic health drinks can increase the risk of premature death. Other studies have linked that synthetic multivitamin in these health drinks use to increased cancer risk, and synthetic folic acid in these health drinks is harmful for our health as It build up in the body and raise the risk of cancer whereas Natural nutrients in nutrease powder contain "whole food supplements," which are made from concentrated, dehydrated whole foods.

The major nutrients present in Nutrease Kid powder include Natural carbohydrates, proteins, lipids, vitamins, and minerals in the form of plant nutrients. They have tremendous impact on the health care system and may provide medical health benefits including the prevention and/or treatment of disease and also they are 100% safe, natural and having no side effects.

Good nutrition is essential for the growth and development that occurs during an infant's first year of life. When developing infants are fed the appropriate types and amounts of foods, their health is promoted. Positive and supportive feeding attitudes and techniques demonstrated by the caregiver help infants develop healthy attitudes toward foods, themselves, and others.

Throughout the first year, many physiological changes occur that allow infants to consume foods of varying composition and texture. As an infant's mouth, tongue, and digestive tract mature, the infant shifts from being able to only suckle, swallow, and take in liquid foods, such as breast milk or infant formula, to being able to chew and receive a wide variety of complementary foods.

At the same time, infants progress from needing to be fed to feeding themselves. As infants mature, their food and feeding patterns must continually change. For proper growth and development, an infant must obtain an adequate amount of essential nutrients by consuming appropriate quantities and types of foods. During infancy, a period of rapid growth, nutrient requirements per pound of body weight are proportionally higher than at any other time in the life cycle

2. Nutrition for kids: Guidelines for a healthy diet

- Banana Leaf Extract
- Curry Leaf Extract
- Guava Leaf Extract
- Amla Extract
- Annatto Extract
- Sesbania Extract
- Lantana Cansara Extract
- Moringa Extract
- Mustard Seed Extract
- Citrus Bioflavonoids
- Lemon Extract
- Tulsi Extract

NUTREASE KIDS IS A UNIQUE KIDS MEAL ESSENTIALS FORMULA ENCOMPASSING THE WISDOM OF NATURE

PUGOS presents **NUTREASE KIDS**, a Unique product that is first of its kind in INDIA. It is a Kids Meal Essentials formula specially formulated for children keeping in mind their daily nutritional requirements. It is a balanced nutritional drink with a comprehensive blend of proteins, fibers, healthy fats, carbohydrates and essential nutrients for your child's growth and development.

PUGOS has taken utmost care to encompass nature's wisdom in **NUTREASE KIDS** for the health support of your little ones. It is an exclusive product with plant based vitamins and minerals with a broad spectrum of closely related vitamins and phytonutrients. It is the only Kids supplement with standardized vitamins and minerals extracted from fruits and vegetables extracts.

These naturally extracted sources are beneficial in

- ▶ Maintaining healthy bones and teeth
- ▶ Regulating bowel movement
- ▶ Maximizes growth potential
- ▶ Rich in iron and folic acid
- ▶ Improves digestion
- ▶ Boosts eye health
- ▶ Improves attention and concentration
- ▶ Enhances learning abilities
- ▶ Helps to prevent allergies
- ▶ Supports immune system and heals wounds
- ▶ Defends the body against potentially harmful bacteria

The World Health Organization's (WHO) expert report on energy and protein requirements states: The energy requirement of an individual is a level of energy intake from food that will balance energy expenditure when the individual has a body size and composition and level of physical activity, consistent with long-term good health; and that would allow for the maintenance of economically necessary and socially desirable physical activity. In children, the energy requirement includes the energy needs associated with the deposition of tissues at rates consistent with good health.

A general indicator of whether an infant is consuming an adequate number of kilocalories per day is the infant's growth rate in length, weight, and head circumference. However, physical growth is a complex process that can be influenced by size and gestational age at birth, environmental and genetic factors, and medical conditions, in addition to dietary intake.

In general, most healthy infants double their birth weight by 6 months of age and triple it by 12 months of age. However, keep in mind that there are normal differences in growth between healthy breastfed and formula-fed infants during the first year of life. After 3 months of age, the rate of weight gain in the breastfed infant may be lower than that of formula-fed infants.

Carbohydrates are necessary in the infant's diet because they supply food energy for growth, body functions, and activity; allow protein in the diet to be used efficiently for building new tissue. Allow for the normal use of fats in the body and provide the building blocks for some essential body compounds.

Carbohydrates serve as primary sources of energy to fuel bodily activities while protein and fat are needed for other essential functions in the body, such as building and repairing tissues.

Nutrition for kids is based on the same principles as nutrition for adults. Everyone needs the same types of nutrients — such as vitamins, minerals, carbohydrates, protein and fat. What's different about nutrition for kids, however, is the amount of specific nutrients needed at different ages.

2.1 Consider these nutrient-dense foods

- **Protein.** Choose seafood, lean meat and poultry, eggs, beans, peas, soy products, and unsalted nuts and seeds.
- **Fruits.** Encourage your child to eat a variety of fresh, canned, frozen or dried fruits — rather than fruit juice. If your child drinks juice, make sure it's 100 percent juice.
- **Vegetables.** Serve a variety of fresh, canned or frozen vegetables — especially dark green, red and orange vegetables, beans and peas.
- **Grains.** Choose whole grains, such as whole-wheat bread, oatmeal, popcorn, quinoa, or brown or wild rice.
- **Dairy.** Encourage your child to eat and drink fat-free or low-fat dairy products, such as milk, yogurt, cheese or fortified

Ages 2 to 3: Daily guidelines	
Calories	1,000-1,400, depending on growth and activity level
Protein	2-4 ounces
Fruits	1-1.5 cups
Vegetables	1-1.5 cups
Grains	3-5 ounces
Dairy	2-2.5 cups
Ages 4 to 8: Daily guidelines	
Calories	1,200-2,000, depending on growth and activity level
Protein	3-5.5 ounces
Fruits	1-2 cups
Vegetables	1.5-2.5 cups
Grains	4-6 ounces
Dairy	2.5-3 cups
Ages 9 to 13: Daily guidelines	
Calories	1,600-2,600, depending on growth and activity level
Protein	5-6.5 ounces
Fruits	1.5-2 cups
Vegetables	2-3.5 cups
Grains	5-9 ounces
Dairy	3 cups

2.2 What is Malnutrition in kids?

Malnutrition refers to insufficient, excessive, or imbalanced consumption of nutrients. In developed countries, the diseases of malnutrition are most often associated with nutritional imbalances or excessive consumption. Although there are more people in the world who are malnourished due to excessive consumption, according to the United Nations World Health Organization, the real challenge in developing

nations today, more than starvation, is combating insufficient nutrition, the lack of nutrients necessary for the growth and maintenance of vital functions.

2.3 Illnesses caused by Deficiency of nutrient consumption

Nutrients	Deficiency
Energy	starvation, marasmus
Simple carbohydrates	None
Complex carbohydrates	None
Saturated fat	low sex hormone levels
Trans fat	None
Unsaturated fat	None
Fat	Malabsorption of fat-soluble vitamins, rabbit starvation (if protein intake is high), during development: stunted brain development and reduced brain weight.
Omega-3 fats	cardiovascular disease
Omega-6 fats	None
Cholesterol	during development: deficiencies in myelination of the brain.
Protein	kwashiorkor
Sodium	hyponatremia
Iron	anemia
Iodine	goiter, hypothyroidism
Vitamin A	xerophthalmia and night blindness, low testosterone levels
Vitamin B ₁	beriberi
Vitamin B ₂	cracking of skin and corneal unclaration
Niacin	pellagra
Vitamin B ₁₂	pernicious anemia
Vitamin C	scurvy
Vitamin D	rickets
Vitamin E	nervous disorders
Vitamin K	hemorrhage
Calcium	osteoporosis, tetany, carpopedal spasm, laryngospasm, cardiac arrhythmias
Magnesium	Hypertension
Potassium	hypokalemia, cardiac arrhythmias

Choline	mg	150	30
Taurine	mg	36	7.2
L-carnitine	mg	10	2
Inositol	mg	40	8

3.2 Pharmacological Action of Nutrease Kids

- ▶ Choline, provides as a memory vitamin for your child.
- ▶ Taurine, provides for proper brain functioning.
- ▶ DHA (Docosahexaenoic acid) from algal source is important for optimal visual and cognitive development.
- ▶ Prebiotics and fiber helps in maintaining a healthy gut and also makes it easier for the body to absorb the essential nutrients.
- ▶ L-carnitine (LONZA, Switzerland) helps in healthy heart function.
- ▶ MUFAs (Monounsaturated fatty acids) reduce the bad cholesterol (LDL) and increase good cholesterol (HDL).
- ▶ Magnesium is an essential mineral to maintain a regular heartbeat.
- ▶ Prebiotics (Inulin and FOS) and minerals like Iron & zinc provides support to the immune system function.
- ▶ Vitamin A helps in generating immune responses.
- ▶ Vitamin D helps in prevention of allergies.
- ▶ Vitamin K improves bone health and helps reduce fractures.
- ▶ Manganese essentially supports in bone formation.

4. Conclusion

Nutrition describes the processes by which all of the food a person eats are taken in and the nutrients that the body needs are absorbed. Good nutrition can help prevent disease and promote health. Carbohydrate, Protein, Vitamins and minerals are an important part of nutrition. Vitamins are organic substances present in food. They are required by the body in small amounts to regulate metabolism and to maintain normal growth and functioning. Minerals are vital because they are the building blocks that make up the muscles, tissues, and bones. They also are important to many life-supporting systems, such as hormones, transport of oxygen, and enzyme systems. Nutrease kid, A good nutrition plan will ensure that a balance of food groups, and the nutrients supplied by each group, is eaten A poor diet may have an injurious impact on health, causing nutrition deficiency diseases such as scurvy and kwashiorkor health-threatening conditions like obesity and metabolic syndrome and such common chronic systemic diseases .
